

Wallabies warm care force air patient warming system is innovative and customized products of Pharmacale Health Care inc.

Patient Care is Essential Before After and During Surgery.

Micro perforation of white fabric with cubic honey comb structure filter dust free air to prevent surgical site infection

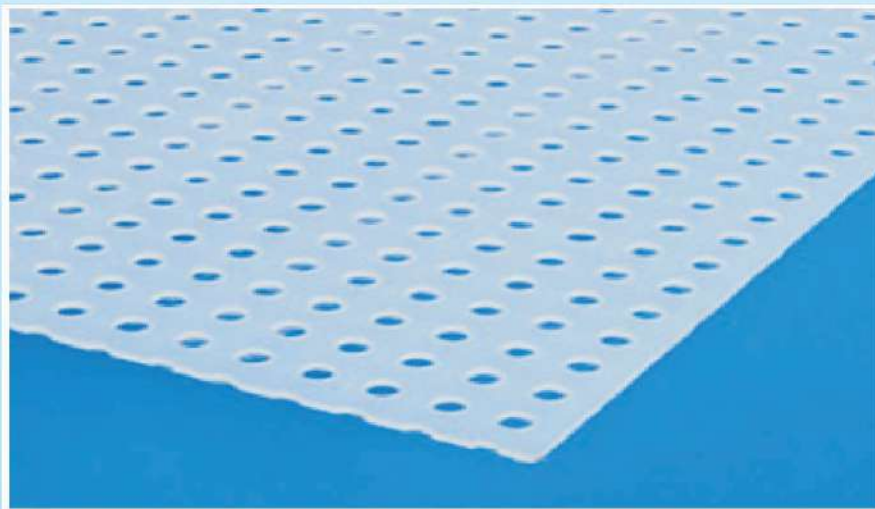

Wallabies Warm Care Blanket

the process of air convections is due to the transfer of heat. Through controlled diffusion, warm air moves from a high-volume blower to a low-pressure blanket. The warm air from the blower gets equally distributed in the warming blanket and with the help of this blanket, the temperature of the patient's body can be capped to a certain level.

The convective warmer draws ambient-temperature air through a HEPA air filter. The filtered air is warmed to a selected temperature connected to universal hose of the warmer

Blankets are suitable mainly all type of warmers

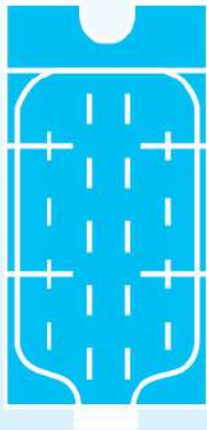

Micro perforation of white fabric with cubic honey comb structure filter dust free air to prevent surgical site infection. Wallabies warm care blankets are lint, latex free and fluid resistance. Blanket is made from soft fabrics, even perforation for even continuous convective warming air all over the patient body.

Blankets has been designed specifically for patients with our full range of warming blankets

A full range of blankets to accommodate every type of pediatric and adult patient and procedure.

WWC 101

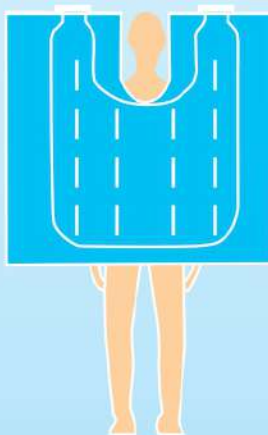

Full Body Multi Access Blankets Size 110 cm x 200cm

Number of air inlets: 1
